Natalie,

I am attaching my notes with the concerns that I have regarding the proposed solar farm.

Thank you,
Julie Webster

We have lived at the corner of Almora Terrace and Brookside Drive for 35 years. We enjoy all the animals that roam though our yard and are concerned about the effects that a solar panel farm would have on our neighborhood. Other issues are about the removal of trees on the wildlife and potential water contamination. How much heat would the panels put off in the summer? There is not much sun in our area from November through March. How will this impact our wells? We are against allowing vehicles use the area that is zoned for agriculture use only. We don't want trucks on our streets every day. Who would pay to repair any damages to the roads? If this allowed will it lead to further provisions in the future for a housing development? Another thing is the impact on the value of our property.
